PROJECT TITLE

Employee Performance Analysis using Excel

AGENDA

1. Problem Statement
2. Project Overview
3. End Users
4. Our Solution and Proposition
5. Dataset Description
6. Modelling Approach
7. Results and Discussion
8. Conclusion

PROBLEM STATEMENT

In today's competitive business environment, effective employee performance is crucial for achieving organizational goals. However, our company lacks a comprehensive, data-driven approach to evaluating and improving employee performance.

The current performance evaluation methods are largely qualitative, subjective, and prone to bias, which often results in inconsistent and inaccurate assessments. This has led to challenges in identifying top performers, understanding the factors that contribute to high or low performance, and implementing targeted interventions to improve overall productivity.

PROJECT OVERVIEW

Employee performance is a critical factor in the success of any organization. With the growing need to optimize productivity and align employee efforts with organizational goals, it has become imperative to adopt a data-driven approach to performance management. This project aims to develop an analytical framework that can accurately assess employee performance, identify key factors influencing it, and provide actionable insights to enhance overall productivity and employee satisfaction.

WHO ARE THE END USERS?

- Human Resources (HR) Team
- Department Heads & Managers
- Executive Leadership
- Employees
- Training and Development Teams
- Project Management Office (PMO)

OUR SOLUTION AND ITS VALUE PROPOSITION

Conditional formatting – missing cells
Filter – remove missing row
Formula – performance
Pivot – summary
Graph- data visualization

Dataset Description

Employee = Kaggle

26 features

9 features

Emp id –num

Name –text

Employee type

Performance level

Gender- male , female

Employee rating -num

THE "WOW" IN OUR SOLUTION

Performance level =IFS(Z8>=5,"VERY
HIGH",Z8>=4,"HIGH",Z8 >=3,"MED",TRUE,"LOW")

MODELLING

DATA COLLECTION :

- From 'Kaggle'

FEATURE COLLECTION:

DATA CLEANING:

- identified missing values
- filtered out missing values

PERFORMANCE LEVEL:

- in column AA
- using formula - =IFS(Z8>=5,"VERY HIGH",Z8>=4,"HIGH",Z8>=3,"MED",TRUE,"LOW")

PIVOT TABLE :

- chose fields to be added to the report
- prepared Bar chart using the report

RESULTS

conclusion

The employee performance analysis, as represented in the pivot chart, shows varying levels of performance across different business units.

There is significant variability in performance levels within each business unit. Some units, such as PL and SVG, appear to have a higher number of employees in the "VERY HIGH" performance category compared to others like BPC and CCDR. -

The presence of linear and exponential trend lines for "MED" and "LOW" performance levels suggests an attempt to visualize the overall trend in performance distribution across units. The linear trend for "MED" indicates a stable performance distribution, while the exponential trend for "LOW" may suggest a reduction or increase in low performance across units.

Business units with a higher concentration of "LOW" performance levels may need targeted interventions, such as additional training or performance improvement plans.

Units with a higher concentration of "VERY HIGH" performers could benefit from recognizing and possibly promoting these individuals, or understanding the practices contributing to high performance.
